

Individual reflection, Daniel Danielsson, week 3

What do I want to learn or understand better?

I think everyone in the project needs a better understanding of GWT, and that is also something we achieved this week. During a coding meeting we had, we discovered that we can use any java library as long as we wrote the code on the server side. This was a major issue in the beginning of the week since we were not able to use many common java libraries on the client side (because it has to be translated into javascript).

How can I help someone else, or the entire team, to learn something new?

Since we write code together there is always some things that we can learn from each other. I also contribute with some html/css knowledge that could be valuable in this project.

What is my contribution towards the team's use of Scrum?

Attended the meeting on Monday where we planned tasks and user stories.

What is my contribution towards the team's deliveries?

A lot of time went into useless attempts to translate code in order for it to be translatable to javascript. Luckily we found the solution to this by coding in on the server-side instead.
