Individual reflection, Daniel Danielsson, week 5

What do I want to learn or understand better?

How to style our project with html/css when using gwt. There is some differences when using gwt as framework from normal html/css. I need to get a better understanding of this so that I can make the project look better.

How can I help someone else, or the entire team, to learn something new?

I can show the rest of the team how to style a web application with html and css.

What is my contribution towards the team's use of Scrum?

Attended meetings and tried to use react for the front-end part of the project. This was because we had some major problems with git, and we thought that another framework than gwt could solve the issue faster. We finally managed to get our repository to work by the middle of the week, so we decided to stick with gwt.

What is my contribution towards the team's deliveries?

I have improved the GUI of our application with html/css. Also added a buy ticket button.
